FSG Zambia fertilisers ensure a successful yield.

SUPERFERT VEG BLEND 1 (10 N : 10 P : 20 K)

Superfert veg blend 1 is a perfect basal dressing fertiliser for horticulture production. It has the required nutrient composition to protect young plants from challenges such as root scotching during the initial stages of crop establishment.

This fertiliser can be applied before planting or within the first week after transplanting. The recommended application is 10 g of Superfert veg blend 1 per plant, placed 5 cm away beneath the soil surface. This blend provides sufficient phosphorous to promote quick root formation and strengthen cellulose in the xylem cells of young plants. Superfert provides the necessary nutrition for young plants to flourish during the initial stages of crop development which is a critical stage in determining the potential of your yield.
