

Galvanized Coils for Roll-forming Machines

GALVANIZED COIL...

Galvanized steel is represented by cold- and hot-rolled coils with a zinc coating, which helps to protect the steel against atmospheric corrosion. Having the steel coil galvanized helps the user by allowing it to be applied in outdoor fabrication projects. Galvanized steel coil is often used for roofing applications, thanks to its weather-resistant coating and its natural ability to avoid rust or corrosion.

CAN BE USED FOR:

- Corrugated roof sheets
- IBR & Widespan roof sheets
- Door frames
- Gutters
- Down pipes
- CZ-Purlins
- Guardrails
- Shutter doors
