

Vibrating table to vibrate moulds

VIBRATING TABLE...

Revaro Engineering designs and manufactures 3phase Vibrating tables in their fully equipped workshop, used during the manufacture of concrete casting products such as lintels and slabs.

Vibrating tables consist of vibrating motors and a control unit and come in two sizes, 1.2 x 1.2m & 1.2 x 2.4m.

The vibrating action helps materials and products nest closely together and dislodges any air bubbles in the concrete mix, resulting in a stronger, more durable product.
